

# Master Controller

# MC 400

## Features

- Parallel redundant signals for traction and braking via absolute encoders
- Two emergency brake switches
- Spring back return to coast from increase power and decrease power. (three steps in each direction)
- Mechanical interlock in "0" position with release button in handle
- Emergency brake position
- Seven brake steps

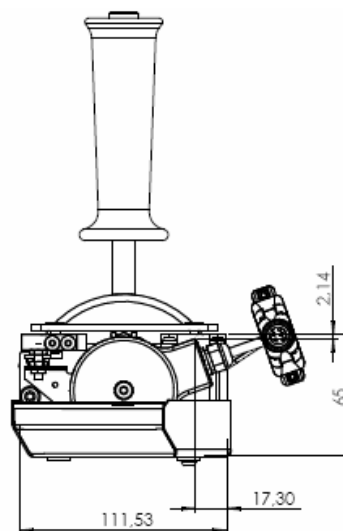

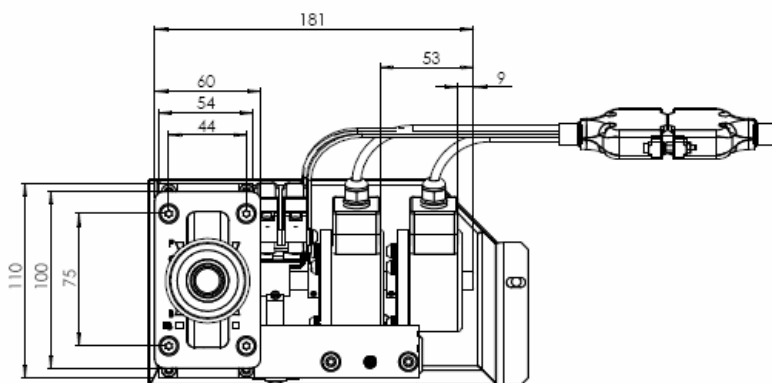

## Technical description

- Master Controller constructed by steel and aluminium parts, surface treated for tough conditions.

## Technical data

- Power supply for digital signals: DC 24-30 V
- Weight: 5 kg
- Double absolute encoders
- Electrical interface: D-sub connector
- 73,5 degrees operating angle
